1. Foreword

1.1. Document Update

1.1.1. Revisions

Internal Reference	Software Version	Document Date Issued
RAA060AEN	1.0.x	March 2017
RAA060BEN	1.2.x	July 2018

When a subsequent software version changes the information in this document, a new electronic edition is released and supplied by HORIBA Medical.

This document is only available online at www.horiba-abx.com/documentation.

1.1.2. What's New?

Here is the list of major updates in this document release:

- Addition of two new parameters
- Correction of some incorrect lengths of field
- Correction of some incorrect types of field (required and optional)
- Correction of panels send by the LIS
- Deletion of the example message for results without images.

2. HL7 Format

2.1. Protocol Description

2.1.1. Overview

This document is intended as a guide for software developers responsible for creating the interface between a hospital (or laboratory) information system (LIS/LIMS/EMR) application and Yumizen P8000. It is assumed that these software developers are familiar with the HL7 standard and have the HL7 specification documents available for reference.

Message structure

The following table briefly describes concepts used when describing the HL7 high level protocol. For further details refer to the original HL7 standard specification.

Concept	Definition
Message	A complete, self-contained entity of data. An example of a message is a complete patient test result including patient identification, order information, parameter values and error messages.
Segment	A message is composed with segments each containing related elements of data (attributes). Examples of segments are the patient information segment keeping all the patient data that is common to all tests and the order segment keeping data that is common for the individual test.

Concept	Definition
Field	Each segment has a number of fields each holding one or more data elements (attributes). For instance, the patient information segment has a field containing the patients name and a field holding the patients birth date.
Component field	A field may be divided into several component fields. The name field of the patient information segment has the components last name, first name and middle initials.

Messages consist of segments of various types that are listed in the table below:

Segment Type	Name
MSH	Message Header Segment
MSA	Message Acknowledgement Segment
PID	Patient Identification Segment
PV1	Patient Visit Segment
ORC	Common Request Segment
TQ1	Timing/Quantity Segment
OBR	Observation Request Segment
SPM	Specimen Segment
OBX	Observation Result Segment
NTE	Notes and Comments Segment

To report results Yumizen P8000 sends messages to the LIMS as a sequence of segments.

Delimiters

Delimiters are used to separate the segment into fields and field components. Delimiters may vary from implementation to implementation, and are defined as part of the header segment.

The following delimiters are used in Yumizen P8000:

Delimiter	Name	Dec. Code	Hex. Code
	Field Delimiter	124	7C
~	Repeat field delimiter	126	7E
^	Component field delimiter	94	5E
&	Sub component delimiter	38	26
	Escape character	91	5C

Fields

A field is a string of characters.

HL7 does not take into account how systems store data within an application.

When fields are transmitted, they are sent as character strings.

Whether the field is required, optional, or conditional in a segment, this information is provided in the column labeled OPT.

The designations are:

Designation	Description
R	Required
RE	Required but may be Empty: The field or data type component description must stipulate when the field or data type component may be empty.
O	Optional
C	Conditional on the triggered event or on some other field(s). The field definitions following the segment attribute table should specify the algorithm that defines the conditionality for this field.
X	Not used with this triggered event
B	Left in for backward compatibility with previous versions of HL7. The field definitions following the segment attribute table should denote the optionality of the field for prior versions.
W	Withdrawn
CE	Conditional but it may be empty

Date Format

Dates are always sent as: YYYYMMDD.

Times are always sent as: HHMMSS.

Dates and Times together are sent as: YYYYMMDDHHMMSS. When Yumizen P8000 receives a Date or Date/Time, the following formats are allowed: YYYYMMDD, YYYYMMDDHHMM and YYYYMMDDHHMMSS.

Decimal values are transmitted with a “.” character as the decimal separator.

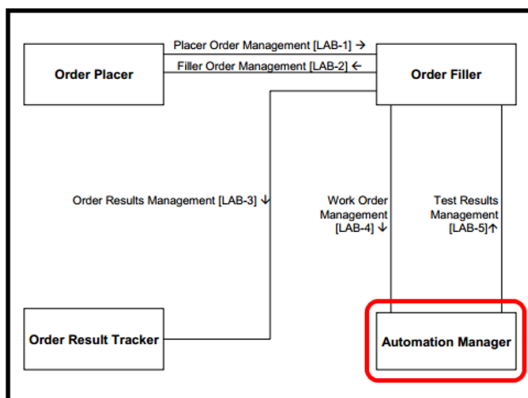

2.1.2. Interface Description

Yumizen P8000 needs to populate its own database with data regarding samples worked by laboratory instruments. This information is usually received from an external system. The Yumizen P8000 HL7 interface provides a correct data flow from that system to Yumizen P8000 database.

- The external system must encapsulate requests information in an HL7 message and send it to Yumizen P8000 HL7 interface. This process is called *requests downloading* in the Yumizen P8000 workflow.
- Yumizen P8000 is capable to send results regarding samples to an external system when result information is ready. The Yumizen P8000 HL7 interface encapsulates sample results data in HL7 messages and sends the messages to the external system. This process is called *results uploading* in the Yumizen P8000 workflow.
- LIS must communicate with two lines:
 - Port 10001 as client for requests sent from LIS to Yumizen P8000. The communication closes after the end of the message.
 - Port 10002 as server for results sent from Yumizen P8000 to LIS.

2.1.3. Automation Manager Scenario

This integration scenario applies when Yumizen P8000 plays the role of the Automation Manager. The connected external system (usually a LIS) is an Order Filler, as shown in the following diagram.

The transactions supported for this scenario are:

- The external system sends orders to Yumizen P8000 (requests downloading): the interaction is similar to one described in the transaction “*Work Order Management (LAB-4)*” of IHE Laboratory Technical Framework. As stated in the IHE document “*This transaction is used if the Order Filler issues a new order to the Automation Manager*”.
- Yumizen P8000 sends results to the external system (results uploading): the interaction is similar to one described in the transaction “*Test Results Management (LAB-5)*” of IHE Laboratory Technical Framework. As stated in the IHE document “*This transaction is used when Automation Manager transmits test results to Order Filler*”.

2.1.4. Comments

Yumizen P8000 does not manage reruns coming from LIS.

Yumizen P8000 manages reflex coming from LIS.

2.1.5. Message Structure

The following table lists the message types supported by Yumizen P8000 for the laboratory testing workflow transactions:

Message	Description
OML^O33 Laboratory order for multiple order related to a single specimen	Specimen oriented order information used to send request from an external system to Yumizen P8000 (requests downloading).
ORL^O34 Laboratory order response	Application Acknowledgement/Rejection of a request message send from Yumizen P8000 to an external system.
OUL^R22 Unsolicited Specimen Observation Message	Specimen oriented result values used to send results from Yumizen P8000 to an external system (results uploading).
ACK Generic Acknowledgement Message	Commit Acknowledgement/Rejection of a message used for both request and result message.

2.1.5.1. OML^O33^OML_O33

The following table lists the detailed structure for message OML^O33 used to send request from an external system to Yumizen P8000:

Segment	Meaning	Usage	Card.
MSH	Message Header	R	[1..1]
[--- PATIENT begin	R	[1..1]
PID	Patient Identification	R	[1..1]
PV1	Patient Visit	RE	[0..1]

2.1.5.2. OUL^R22^OUL_R22

The following table lists the detailed structure for message OUL^R22 used to send results from Yumizen P8000 to an external system.

Segment	Meaning	Usage	Card.
MSH	Message Header	R	[1..1]
[PID]	Patient Identification	R	[1..1]
PV1	Patient Visit	O	[0..1]

[[NTE]]	Notes and Comments	O	[0..*]
]]	--- RESULT end		
}	--- ORDER end		
}	--- SPECIMEN end		

2.1.5.3. ACK / ORL^O34^ORL_O34

The following table lists the detailed structure for message ACK used to acknowledge message reception by both Yumizen P8000 and an external system:

Segment	Meaning	Usage	Card.
MSH	Message Header	R	[1..1]
MSA	Message Acknowledgement	R	[1..1]
[ERR]	Error	O	[0..1]

2.2. OUL Message Segments

2.2.1. MSH - Message Header Segment

The MSH segment defines the intent, source, destination, and some specifics of the syntax of a message.

The Message Header segment contains general information and identifies the sender. The Message Header segment is always the first record in a transmission.

2.2.5. OBR - Observation Request Segment

In the reporting of clinical data, the OBR serves as the report header. It identifies the observation set represented by the following atomic observations. It includes the relevant ordering information when that applies. It contains many of the attributes that usually apply to all of the included observations.

The Universal Service Identifier field corresponds to any parameters or compatible panels:

CBC

DIF

RET

SLIDE

- To request a CBR, send CBC in one group of ORC, TQ1 and OBR frames and RET in another group of ORC, TQ1 and OBR frames.
- To request a DIR, send CBC in one group of ORC, TQ1 and OBR frames, a DIF in another group of ORC, TQ1 and OBR frames and RET in another group of ORC, TQ1 and OBR frames.

2.2.11. Special characteristics for HORIBA Medical data

2.2.11.1. Parameters

CBC Code	Definition
WBC	White Blood Cells
TNC	Total Nucleated cells
CWBC	Corrected White Blood Cells
RBC	Red Blood Cells
HGB	Hemoglobin Concentration
HCT	Hematocrit
MCV	Mean Corpuscular Volume
MCH	Mean Corpuscular Hemoglobin
MCHC	Mean Corpuscular Hemoglobin Concentration
RDW-CV	Red Distribution Width
RDW-SD	Red Distribution Width Standard Deviation
PLT	Platelets
PDW *	Platelets Distribution Width
PCT *	Plateletcrit
MPV	Mean Platelet Volume
MIC% *	Microcytic Red Blood Cells percentage (versus RBC)
MAC% *	Macrocytic Red Blood Cells percentage (versus RBC)
PLTO	Platelets from optical channel

DIFF Code	Definition
LYM#	Lymphocytes absolute value
LYM%	Lymphocytes percentage
MON#	Monocytes absolute value
MON%	Monocytes percentage
NEU#	Neutrophils absolute value
NEU%	Neutrophils percentage
EOS#	Eosinophils absolute value
EOS%	Eosinophils percentage
BAS#	Basophils absolute value
BAS%	Basophils percentage
ALY# *	Atypical Lymphocytes absolute value
ALY% *	Atypical Lymphocytes percentage
LIC# *	Large Immature Cells absolute value
LIC% *	Large Immature Cells percentage
Band Cel%	Bands percentage
Band Cel#	Bands absolute value
Metamyelo%	Metamyelocytes percentage
Metamyelo#	Metamyelocytes absolute value
Myelocytes%	Myelocytes percentage
Myelocytes#	Myelocytes absolute value
Blast%	Blasts percentage
Blast#	Blasts absolute value
Promyelo%	Promyelocytes percentage
Promyelo#	Promyelocytes absolute value
Plasmocyte%	Plasmocytes percentage
Plasmocyte#	Plasmocytes absolute value
ProLympho%	Prolymphocytes percentage
ProLympho#	Prolymphocytes absolute value
HyperBasoLY%	Hyper baso lymphocytes percentage
HyperBasoLY#	Hyper baso lymphocytes absolute value

DIFF Code	Definition
Promonocyte%	Promonocytes percentage
Promonocyte#	Promonocytes absolute value
Sezary Cel%	Sezary cells percentage
Sezary Cel#	Sezary cells absolute value
Other%	Other cells percentage
Other#	Other cells absolute value
AtypLympho%	Atypical Lymphocytes percentage (manual count)
AtypLympho#	Atypical Lymphocytes absolute value (manual count)

Extended DIFF Code	Definition
IML# *	Immature Lymphocytic cells absolute value
IML% *	Immature Lymphocytic cells percentage
IMM# *	Immature Monocytic cells absolute value
IMM% *	Immature Monocytic cells percentage
IMG# *	Immature Granulocytic cells absolute value
IMG% *	Immature Granulocytic cells percentage
NRBC#	Nucleated Red Blood Cells absolute value
NRBC%	Nucleated Red Blood Cells percentage

RET Code	Definition
RET#	Reticulocytes absolute value
RET%	Reticulocytes percentage
RETL% *	Reticulocytes with a low RNA content
RETM% *	Reticulocytes with a medium RNA content
RETH% *	Reticulocytes with a high RNA content
CRC	Corrected Reticulocyte Count
MRV *	Mean Reticulocyte Volume
MFI% *	Mean Fluorescence Index
IRF	Immature Reticulocyte Fraction

RET Code	Definition
RHCc	Reticulocyte Hemoglobin Cellular content
PIC *	Fluorescence range

* USA only: PDW, PCT, PLTOPT, ALY#, ALY%, LIC#, LIC%, IML#, IML%, IMM#, IMM%, IMG#, IMG%, MFI%, RHCc have not been validated for a clinical diagnostic use in USA for this instrument.

This list of codes can be modified through a conversion table.

2.2.11.2. Suspected Pathologies

Suspected pathologies are transmitted through one Comment record located after the corresponding Result record. If several pathologies are suspected, they are transmitted through several NTE frames.

Refer to [NTE - Notes and Comments Segment](#).

2.4. Minimal Lower Layer Protocol

This section describes a minimal HL7 lower level protocol to be used in a pure network environment. It is an adaptation of the hybrid lower layer protocol. It is assumed that this HL7 protocol is used only in a network environment. Most of the details of error detection and correction are handled by the lower levels of any reasonable network protocol and do not require any supplementation.

The goal of this lower level protocol (LLP) is to provide an interface between HL7 and the network that uses minimal overhead while remaining compatible with other LLPs.

Other types of links, such as RS-232 to a communication server, require another protocol to guarantee their integrity. This version of the lower LLP differs significantly from other lower level protocols in that it has only a single byte to signal the start of a

message and two bytes to signal the end of a message. There is no other lower level header or trailer information. There are no other characters added to the HL7 message.

Notation conventions:

1. Single ASCII characters are enclosed in single quotes.
2. Special characters or non-printing ASCII characters are enclosed in angle brackets, <>.

Special characters are the LLP Start Block and End Block characters.

Non-printing ASCII characters may be written as their abbreviation, e.g., ESC for the Escape character. They also may be written as their hex value in the form 0xXX where X is a hexadecimal digit.

For example in Standard ASCII, <ESC> is <0x1B>.

BLOCK FORMAT

HL7 messages are enclosed by special characters to form a block. The format is as follows:

<SB>dddd<EB><CR>

<SB>

Start Block character (1 byte)

ASCII <VT>, i.e., <0x0B>.

This should not be confused with the ASCII characters SOH or STX.

dddd

Data (variable number of bytes)

This is the HL7 data content of the block.

The data can contain any displayable ASCII characters and the carriage return character, <CR>.

<EB>

End Block character (1 byte)

ASCII <FS>, i.e., <0x1C>.

This should not be confused with the ASCII characters ETX or EOT.

<CR>

Carriage Return (1 byte)

The ASCII carriage return character, i.e., <0x0D>.

3. QC Export

3.1. QC Results Availability

To share QC results with external systems (like LIS or QC expert system), the P8000 is generating csv (or xml) files with all results send by the instruments.

The files are available through a FTP connection, on the P8000 server.

The name of the user for the FTP server is **qc_P8000**. The password is **123456789**.

For each results export, two files will be available: one csv (or xml) and one sem (semaphore files).

The semaphore file will be present as soon as the csv (or xml) file will be ready to be downloaded by the external system.

As soon as the file has been downloaded, the external system will have to delete the csv (or xml) file and the semaphore file.

3.1.1. CSV - File Example (Semicolon Separated) – Used by Default
